

## Recommended Instructions for Flea Eradication with Wondercide™

When these directions are followed, you will no longer have fleas. We can't emphasize enough; you **MUST** treat the property completely to remedy the problem. Spraying here and there will **NOT** make these parasites go away!

### **INDOOR Control for Pets, People, Property:**

For the animals, people and in the house, use EVOLV™, Biter Fighter™ & BioDefense™ as these products will kill the fleas and eggs on contact. All of them can be used on Pets, People & Property (indoor). Be sure to spray everywhere or the fleas will congregate in the untreated areas and the infestation will be back within 3 days to 3 weeks.

**BioDefense™ is not meant for use on plant life and cannot be diluted.**

### **BE SURE TO FOLLOW THESE DIRECTIONS COMPLETELY:**

For inside treatment using BioDefense™; just pour it into a pump-up/compression sprayer and lightly mist everywhere inside and on the animals. Begin with the animals then spray the furniture (sides and cushions of couch and chairs, bedding, etc.) Next, spray entire flooring, even closets and hardwood. (You will not need to spray linoleum or tile flooring but, do spray any wooden baseboards around the floors.

**IMPORTANT FACT ABOUT FLEAS:** Fleas are some of the most difficult parasites to get under control once there is an infestation. They can jump 3-4 feet and can lay dormant up to 3 months. Only 5% of the Flea cycle that you see is adult fleas. Meaning, the other 95% of the flea population is in egg and larvae stages...just waiting to hatch a huge problem if it goes untreated.

**BE SURE TO SPRAY EVERY ROOM IN YOUR HOME! IF YOU LEAVE A ROOM OR EVEN A CLOSET UN-TREATED THAT IS WHERE THE FLEAS WILL CONGREGATE.** This will not stain anything, including furniture, drapes, carpeting, clothes, etc. (test silk or satin fabrics before spraying).

**FOGGING:** NEVER fog with animals present inside, including birds. Any person inside while fogging must wear a mask included with our fogger machine. This is the ultimate in flea, mites, bed bug eradication. Nothing will survive BioDefense™ in a fogger if you follow the directions, though repeat fogging may be required for severe infestations.

**FLAMMABLE:** DO NOT USE Wondercide BioDefense™ NEAR OPEN FLAME.

**VERY IMPORTANT:** Room by Room, Begin by spraying the sides of furniture; couches, chairs & cushions, bedding, etc. THEN, spray the floors (except vinyl or tile floors). Start in one corner and work your way out of the room. It is imperative to buy enough BioDefense™ to spray the entire square footage of your home and furniture as well as any animals you may have. Each Gallon of BioDefense™(used in the compression/pump-up sprayer will cover approx. 1,500 sq. ft. and will cover 2,000 sqft when applied with Fogger)

**NOTE:** If you start spraying in the middle of a room, the fleas and eggs that get a direct spray will die within 1-3 seconds but, the fleas in the surrounding areas will try to get away from it by jumping on you, your animals, the furniture, etc. So, if you spray those areas first when the flea jumps there it will retreat back to the floor and subsequently die. We also recommend spraying your legs first so you don't get bit.

**FOR CATS:** Unlike dogs, cats are constantly grooming themselves and you don't want them ingesting too much of the cedar. So, just give them a light misting all over EXCEPT on their face. Spray a little Evolv™ or BioDefense™ in your hands and just rub it on their face.

**FOR DOGS:** Spray liberally everywhere, including the ears via spray or dropper. Spray them as often as needed.

**OUTSIDE TREATMENT:** After spraying thoroughly inside using BioDefense, use EcoTreat™ with a hose-end applicator outside. Begin by spraying the outside of the house, getting down to the foundation and/or patio and spray outward. Spray the sides of the house, the eaves, shrubbery & trees the best you can. Just pull off the little black tab on the hose-end sprayer to get a 20' stream for the eaves. Spray all structures on premise. Fleas are difficult to get rid of so treat all areas where the fleas are. Using 4 oz of EcoTreat Pro You must treat 2 times outside, within 4-7 days to end the egg-laying cycle. For example; if you spray outside today, do it again within 4-7 days. OR use 8 oz. concentrate on first treatment. Afterward, it is just a maintenance issue of once a month or so, depending on the time of year. (OUTDOOR TREATMENT IS HIGHLY RECOMMENDED FOR FLEA ERADICATION. AFTER ALL, INSECTS COME FROM OUTSIDE.)
